

The back seat on the night of the incident.

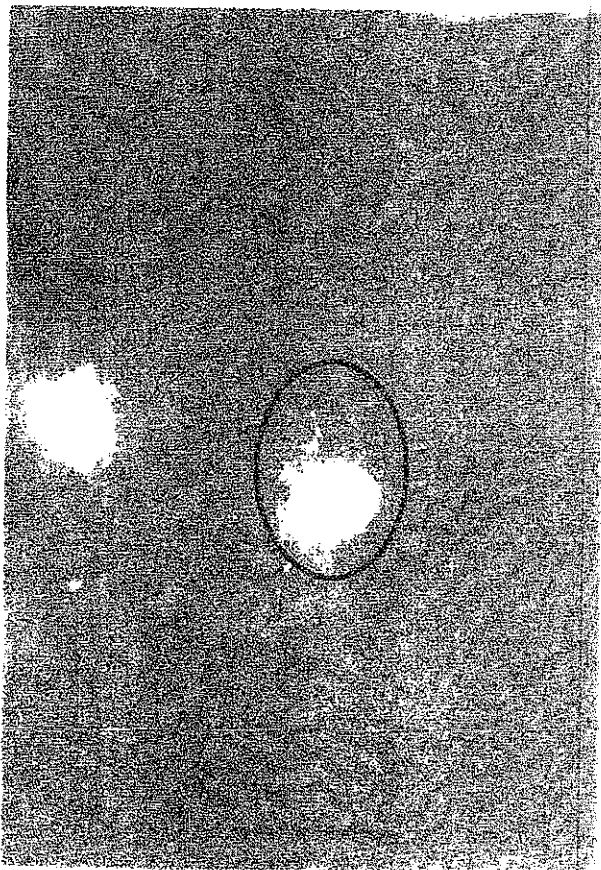

The seat where the woman was sitting when she was struck by the round. Notice the fragmentation and the trajectory of the round again represented by the antenna.

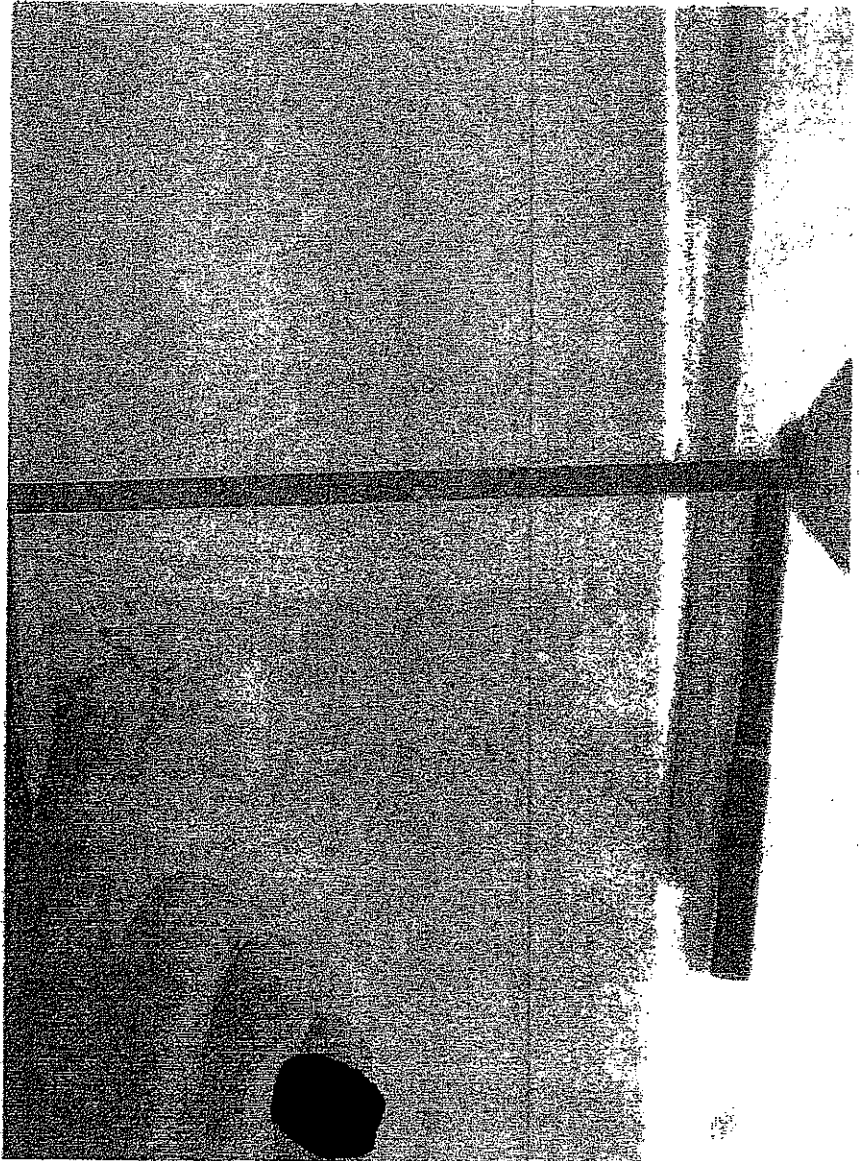

The hole in the glass, from the inside of the car looking out. On the inside, the glass has been dug out, to form an upside down crater suggesting that the impact came from the *inside* not from the outside like from a rock or something else.

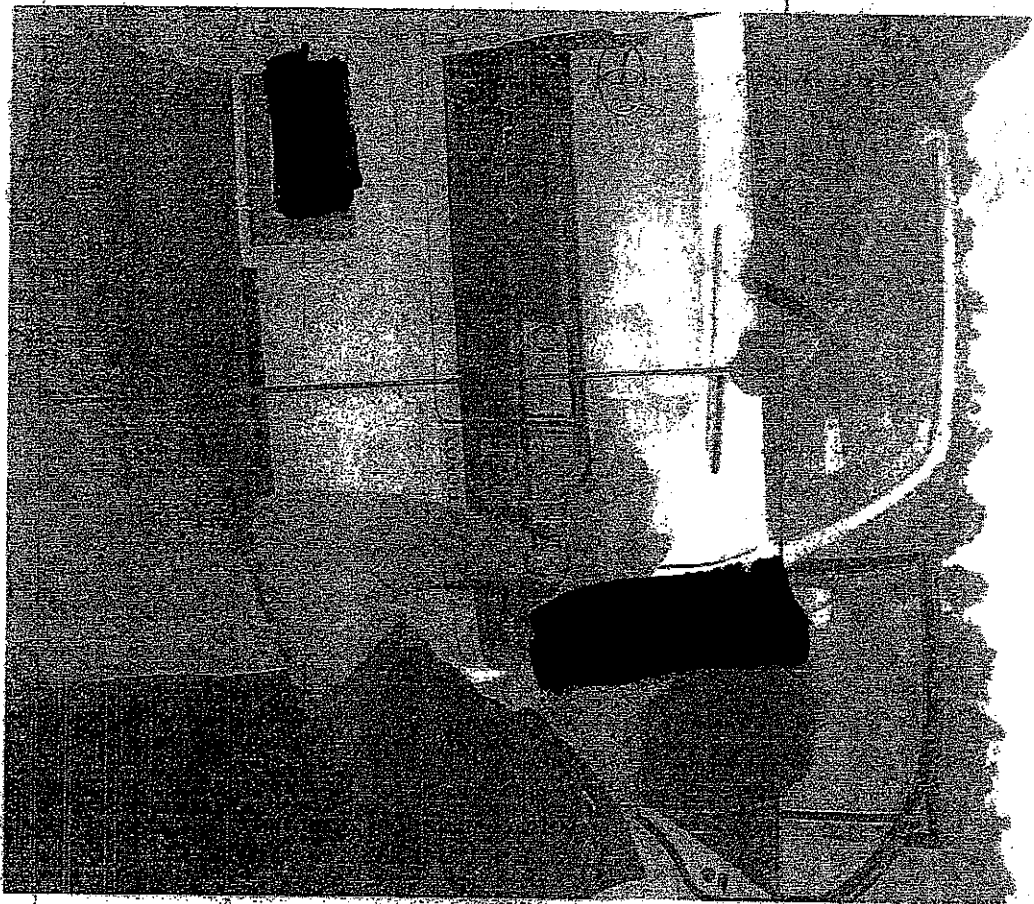

The hole in the windshield from the outside of the vehicle.

The bullet hole was patched up since the initial picture taken on the night of the incident. The red dot indicates a height of 3 feet. The center of the hole is 2 feet 10 inches above the road surface and is located underneath the index finger in the photo.

A wider shot of the previous photograph. Again, notice the red dot on the antenna, which is pointing at the three foot mark above the ground. The interpreter's index finger is centered over the patched bullet hole.
