---
Memorandum

To: Capt. Joni Eddy
From: Sgt. Paul Barron
Date: May 10, 2007
Subject: Mesquite Police Department's Plate Scan System

On Wednesday May 09, 2007 I met with Lt. David Faaborg, with the Mesquite Police Department, to go over their plate scanning system. Lt. Faaborg took me for a demonstration ride in one of two patrol vehicles that are equipped with the plate scanning equipment. Lt. Faaborg advised the company that Mesquite chose was Civica Platescan Automatic License Plate Recognition System. The patrol vehicle has a total of four scanning cameras with three of the cameras mounted on the roof of the car. The fourth camera is mounted inside, attached to the windshield next to the mobile video camera. The cameras are mounted to scan license plates on the right side at a 90 degree angle and the left and right sides at 45 degrees. The inside camera is turned to the left to pick up two lanes to the left and in front of the patrol vehicle.

The system will scan for readable license plates with a light background and dark letters. Therefore it will not scan some out of state plates or handicap plates due to the light letters or insignias on the plates. If driven in a parking lot the system will pick up most vehicles that are parked and scan the plate number against a pre-downloaded list of license plates. Mesquite loads stolen vehicles, sex offender's vehicles, Mesquite warrants, and stolen license plates. As the plate is scanned the plate and a picture of the vehicle are displayed on the computer screen. The screen shows all four of the cameras at once. If the system scans a plate that is on the wanted list it gives the operator an alarm, displays the picture and plate, and states which camera picked up the plate. The operator can not access anything else on the MDT until they acknowledge the hit. The operator can drive at normal speeds and the system will continually scan plates. The system will even scan vehicles traveling the opposite direction on city streets, vehicles that are passing the parked squad car on the interstate, and vehicles that are parked along the roadway as the squad is being driven.
Mesquite has had the two units operable since the middle of March 2007 and has recovered nine stolen vehicles and arrested numerous persons wanted on Mesquite warrants. Mesquite is in the process of purchasing three more units for the patrol fleet. The cost of the unit is approximately $20,000 per squad. Mesquite purchased the units without the assistance from any grants, but Lt. Faaborg advised he heard that Dallas County Sheriffs Office was in the process of purchasing a plate scanner with grant funds. The initial cost to Mesquite for the units, software, installation, and warranty was $61,048.00 for two units.

One of the best features of the system is that it uploads all vehicles it scans into a data base. This includes a picture of the vehicle, the time and date it was scanned, and the location it was scanned using Google maps. If a tag was given out as a suspect in a crime the officer can access the system and see if it has ever been scanned by the system. This is especially useful in apartment complex or school parking lots to see where suspects might live, work, or go to school.

Lt. Faaborg advised the system misreads plates between 5%-20% of the time. Mesquite has their citizen police academy volunteers look at the scanned vehicles and fix any errors for the data base. So far the system has scanned approximately 250,000 vehicles. If other agencies acquire the same system the different agencies can share the scanned information.

I was very impressed with the system and feel that it is a great tool for police work. Even with some of the flaws, they are easily overlooked by the usefulness of the system. In the hands of an aggressive officer the system could generate a lot of activity in the way of locating stolen vehicles, wanted persons, and sex offenders that are violating their court orders by being too close to schools etc. If you have any questions about the system please contact me. I have attached a copy of the Platescan quote that was sent to Mesquite in August 2006.
