What is solitary confinement? Solitary or “supermax” confinement is the practice of placing a prisoner alone in a cell for 22-24 hours a day with little human contact or interaction; reduced or no natural light; restriction or denial of reading material, television, radios and other property; severe limits on visitation; and the inability to participate in group activities. Almost all human contact occurs while the prisoner is in restraints and behind some sort of barrier.1

Who is in solitary confinement? There is a popular misconception that solitary is used only for the most violent and dangerous prisoners.2 In fact, at least 80,000 people are held in “restricted housing” every day in this country3 and the majority of them are severely mentally ill or cognitively disabled.4 Low-risk “nuisance prisoners” are also housed in solitary because they have broken minor rules or filed grievances or lawsuits.5 Children held in adult prisons are also held in solitary “for their own safety.”6 If the use of solitary confinement were restricted solely to the dangerous and the predatory, most supermax prisons would stand virtually empty.

What happens to people in solitary confinement? People placed in solitary exhibit a variety of negative psychological reactions, including severe and chronic depression;7 self-mutilation;8 decreased brain function;9 hallucinations;10 and revenge fantasies.11

The Truth About Solitary Confinement:

<table>
<thead>
<tr>
<th>Jeopardizes Public Safety</th>
<th>Wastes Taxpayer Dollars</th>
<th>Inhumane and Harmful</th>
</tr>
</thead>
<tbody>
<tr>
<td>Prisoners deprived of normal human contact cannot properly reintegrate into society, resulting in higher recidivism rates.12</td>
<td>Building solitary confinement units costs two to three times more than conventional prisons.14</td>
<td>Solitary confinement causes and exacerbates mental illness, leading prisoners in solitary to attempt suicide at significantly higher rates than those in the general prison population.16</td>
</tr>
<tr>
<td>In California and Colorado, data show that nearly 40% of the supermax population is released directly from isolation into the community.13 Most states follow similar practices.</td>
<td>A 2007 estimate in Arizona put the annual cost of placing someone in supermax at $50,000 compared to only $20,000 for the average prisoner. In Texas it costs 45% more to house prisoners in solitary than in conventional prison.15</td>
<td>The mentally ill often deteriorate catastrophically in solitary, leading courts to consistently find that subjecting the mentally ill to solitary is cruel and unusual punishment.17</td>
</tr>
</tbody>
</table>

**Better, More Cost-Effective Alternatives:**

Since the vast majority of prisoners in solitary confinement are eventually released back into the community, it is imperative that we invest our limited public dollars in proven alternatives that lead to greater rehabilitation and pave the way for successful reentry and reintegration.

**States Should Limit the Use of Solitary Confinement in Prisons**

Minimum Standards: The American Bar Association Standards for Criminal Justice, Treatment of Prisoners call for appropriate procedures prior to placing a prisoner in solitary; limiting the duration of solitary; decreasing extreme isolation; closed mental health monitoring for people in solitary; and ending the solitary confinement of the mentally ill.²

Better Alternatives: The State of Michigan reformed its administrative segregation practices through incentive programs. As a result, the number of violent incidents and misconduct dropped.¹⁹ Similarly, following a government study, Maine cut its special management population by over 50% and expanded access to programming and social stimulation.²⁰ Illinois, Mississippi, and Colorado closed entire supermax prisons and saved millions.²¹

Standards for Mentally Ill: In 2011, New York enacted a law that excludes the seriously mentally ill from solitary confinement; requires periodic assessment and monitoring of the mental status of all prisoners subject to solitary confinement for disciplinary reasons; creates a non-disciplinary unit for prisoners with psychiatric disabilities where a therapeutic milieu is maintained and prisoners are subject to the least restrictive environment consistent with their needs and mental status; and requires that all staff be trained to deal with prisoners with mental health issues.²²

As the nation’s largest public interest law organization, with affiliate offices in every state and a legislative office in Washington D.C., the ACLU works daily in courts, legislatures, and communities to promote smarter criminal justice policies.
