A large, detailed image of a monkey's face, centered in the upper half of the slide. The monkey has dark, shaggy fur around its face and a lighter, yellowish-brown face. It has a serious expression and is looking directly forward. A mouse cursor is visible near the bottom of the monkey's face.

SOCIAL ANTHROPOID

WHAT IS SOCIAL ANTHROPOID?

- A CONVERGED COMMS DATABASE. IT ALLOWS YOU TO SEE WHEN YOUR TARGETS HAVE COMMUNICATED:
 - VIA PHONE
 - OVER THE INTERNET
 - OR USING CONVERGED CHANNELS(EG SENDING E-MAILS FROM A PHONE OR MAKING VOICE CALLS OVER THE INTERNET).

WHAT ABOUT EXISTING COMMS DATABASES?

- WHEN SOCIAL ANTHROPOID CONTAINS ALL THE NECESSARY DATA AND HAS ALL THE CORE FUNCTIONALITY OF THE LEGACY TOOLS, SOCIAL ANIMAL, REFORMER/HAUSTORIUM AND SALAMANCA WILL BE DECOMMISSIONED.

WHY?

- SCALING – HUGE VOLUMES OF EVENTS, EXISTING SYSTEMS ARE CREAKING.
- CONVERGENCE.
- APPROPRIATE DESIGN.

BUT STILL NEED TO:-

- ENRICH
- VISUALISE
- MERGE WITH NSA DATA SOURCES

WHAT DATA IS IN SOCIAL ANTHROPOID?

- ALL OF SALAMANCA
- SOCIAL ANIMAL
- INSTANT MESSENGER
- WEBMAIL
- SIP AND H323 VOIP, YAHOO VOICE
- BLACKBERRY
- MMS
- SMS
- GTP (GPRS SESSION SET UPS)
- SMTP, POP3 AND IMAP

Saved queries
You have 1 saved queries.
Saved query functionality has been temporarily disabled.

SAVED QUERIES

- Queries will be automatically submitted to all instances of SOCIAL ANTHROPOID and SOCIAL ANIMAL.
- For bulk queries, enter multiple selectors (one per line).
- If allow wildcards is ticked, * is treated as a multi-character wildcard (e.g. paul* will match paul, paula, pauline).
- Unlike other QFDs, _ and \ have no special meaning (to query for a literal * sign, uncheck allow wildcards).
- By default, results will be returned in which your input selector appears in either the Use or the active user. To return results in which your selector appears only as the active user, tick the 'Query active users only' checkbox.
- **Updated:** The system will automatically retrieve records containing the normalised version of your selector. As such, there is no longer a need to normalise your query seeds manually (e.g. searching for 'paul' will return records for 'paul', 'paula', 'pauline', 'paul@domain.com'). Searches on Yahoo! email addresses will also return records for the domain part of the address. If in doubt, or for further details, consult the user manual.

Saved queries

You have 1 saved queries.

IP

- Queries will be automatically submitted to all instances of SOCIAL ANTHROPOID but NOT to SOCIAL ANIMAL.
- For bulk queries, enter multiple locators (one per line).
- If allow wildcards is ticked, * is treated as a multi-character wildcard.
Unlike other QFDs, _ and \ have no special meaning (to query for a literal * sign, uncheck 'allow wildcards' rather than 'escaping' the wildcard).
- By default, results will be returned in which your input locator appears in either the Source or Other locator column.
Use the checkboxes below to change which of the source, other and destination columns you query.
- Selecting "Search all types" will return all matches regardless of the locator type.
When "Search all types" is false, you must select at least one type. Locators have to match one of these types to be returned. You can only pick the types that are available for the database columns (source, destination and/or other) you have selected.

Locators:

Types to query:

- Cell-Global-Identifier
- Dest-IP-Address
- Dest-Point-Code
